

“THERE IS NO BUSINESS TO BE DONE ON A DEAD PLANET” DAVID BROWER

Sounds a bit drastic? We hear you – but the plain and simple fact is that the way we do business today may simply not be sustainable in the not-so-distant future. Those who begin to take this fact into account now, working towards ‘greening’ every facet of their business, will be the ones that find themselves best equipped to survive in the world’s ever changing temporal, and business, climate.

Key Program Benefits

Cut that Power Bill

We can help you put a PowerSave program into effect across your network helping you to realize a significant cost-savings on your monthly energy bill. The best part is PG&E is offering a 100% rebate on the software licenses needed to take advantage of this savings making this one a real no-brainer!

Go Energy Efficient

We help review your current office equipment and product inventory to discover added places where you can find tangible energy and resource savings.

Automation

We review your businesses processes to understand where you may benefit from online or outsourced business services that can help cut your costs and make your company a leaner, meaner contender.

Recycle, Recycle, Recycle

It’s not just your garbage anymore. Been wondering how to properly rid your office space of those old PCs, monitors and printers? We can help take that gear off your hands and deliver it to your local PC recycler while you rest easy at night knowing you’ve disposed of those old beasts properly, or maybe even helped out a school or charity in need.

Green Your Data Center

Virtualization, power management applications, Power-Sensing technologies; all of these resources can help you to cut-costs in your growing data center while also slowing the inevitable scale-out. We’ll help you pinpoint the best solutions for your network.

Green Your Commute

Yep, we can help you do that too by enabling your employees to do more remotely. American workers spend an average of 38+ hours per year commuting in rush hour traffic — **wasting nearly 2.9 billion gallons of fuel. There is another way.** Our included LogMeIn agents offer your employees a fast, secure way to remotely access their work PC from any Internet connection — enabling them to work from home and reduce the carbon footprint left by their daily commute.

Green Your Building

No, we’re not architects too – but we know some – and many of our partners come highly recommended in their fields for green innovation in design. From solar power to water-saving appliances to green design we can help you to realize more ways to operate your building in an environmentally friendly way.
